

AI & CYBERSECURITY SERVICES

Modern security testing, protection, monitoring and strategic advisory

16 Security Services	AI-FIRST Emerging security capabilities	PROJECT → RECURRING From assessment to continuous security
-------------------------	--	---

Security services designed for modern technology companies, digital businesses and organizations adopting AI.

Our Cybersecurity Services

A focused portfolio spanning AI security, application and cloud security, enterprise risk, security leadership and continuous exposure management.

01

AI Security Assessment & Red Teaming

Identify and validate AI-specific attack paths across AI applications, models, agents, integrations and workflows.

- AI threat modeling
- Prompt injection & jailbreak testing
- Agent/tool abuse scenarios
- Data leakage assessment
- Adversarial security testing

02

AI Application & LLM Security Testing

Test LLM-powered applications and AI integrations for vulnerabilities that traditional application testing may miss.

- LLM application testing
- RAG security review
- Authentication & authorization
- Output manipulation
- AI/API security testing

03

AI Security Governance & Risk Advisory

Build practical governance around organizational AI usage, AI applications, vendors and data.

- AI risk assessment
- AI security policies
- AI vendor risk
- Data & access controls
- AI security roadmap

04

Web Application VAPT

Find and validate vulnerabilities in websites and web applications before attackers can exploit them.

- OWASP-focused testing
- Authentication & authorization
- Business-logic testing
- Manual exploitation
- Risk-rated remediation report

05

API Security Testing

Assess APIs for authorization flaws, data exposure, authentication weaknesses and abuse scenarios.

- REST / GraphQL testing
- BOLA / IDOR
- Token & session security
- Rate-limit testing
- API remediation guidance

06

Cloud Security Assessment

Review cloud environments for misconfigurations, excessive permissions, exposed services and architectural weaknesses.

- AWS / Azure / GCP
- IAM & privilege analysis
- Storage & network exposure
- Logging & security controls
- Cloud hardening roadmap

07 Mobile Application Security Testing Assess iOS and Android applications for vulnerabilities affecting authentication, data, APIs and client-side security. • Static & dynamic analysis • Authentication & sessions • Local data storage • API interaction • Mobile security report	08 Security Architecture & Threat Modeling Identify design-level security weaknesses through architecture, data-flow and threat-model analysis. • Architecture review • Data-flow analysis • Trust-boundary review • Threat modeling • Security design recommendations
09 Cybersecurity Risk Assessment Create a practical view of security posture, business risk and the highest-priority security improvements. • Asset & control review • Threat identification • Risk prioritization • Security maturity review • 90-day action roadmap	10 Microsoft 365 & Identity Security Assessment Review identity, collaboration, email and Microsoft security controls across the M365 environment. • Entra ID review • MFA & Conditional Access • Defender configuration • Exchange/email security • Admin & app permissions
11 Endpoint Security Assessment Evaluate endpoint controls that reduce malware, credential theft, unauthorized access and device compromise. • EDR / antivirus • Patch & hardening • Local admin controls • Encryption • Endpoint policy review	12 Third-Party / Vendor Security Assessment Evaluate cybersecurity risk across suppliers, SaaS providers and technology partners. • Security questionnaire review • Control/evidence assessment • Data protection review • Vendor risk analysis • Remediation guidance

13

vCISO Services

Provide fractional cybersecurity leadership without the cost of a full-time CISO.

- Security strategy
- Risk & governance
- Security policies
- Architecture guidance
- Management reporting

14

Vulnerability Management

Continuously identify, prioritize, track and verify vulnerabilities across an organization's technology environment.

- Scheduled/continuous scanning
- Risk-based prioritization
- Remediation tracking
- Retesting
- Security posture reporting

15

External Attack Surface Management

Continuously discover internet-facing assets and exposures that could provide attackers with an entry point.

- Domain/subdomain discovery
- Internet-facing assets
- Open ports & services
- Exposure alerts
- Prioritized remediation reports

16

Security Exposure & Credential Monitoring

Monitor for exposed credentials, sensitive disclosures and external security exposures relevant to the organization.

- Credential exposure
- Domain/brand monitoring
- Leak detection
- Risk validation
- Actionable response guidance

A Security Program That Scales

Engagements can begin with a focused assessment and expand into remediation guidance, continuous visibility and strategic security leadership.

01 ASSESS	Understand exposure, architecture, risk and control gaps.
02 VALIDATE	Validate real-world security through VAPT, API, mobile and AI testing.
03 IMPROVE	Prioritize remediation and strengthen security controls.
04 MONITOR	Maintain visibility through vulnerability and external attack-surface management.
05 ADVISE	Provide ongoing security leadership through architecture and vCISO services.

Why This Portfolio

The portfolio balances high-intent security testing with higher-value advisory and AI-focused services, while adding recurring capabilities such as vulnerability management and external attack surface management.

BUILD A SECURITY PROGRAM AROUND YOUR REAL RISKS

Start with a focused assessment. Turn findings into a prioritized security roadmap and ongoing protection.

Service scope and testing depth can be tailored to organization size, technology stack, risk profile and business requirements.
